Strict Deadline for Reservations is Thursday May 16th.

Speaker

Gary Frohlich MS, CGC

Senior Patient Education Liaison – Sanofi Genzyme

[Join us to learn more about the most common Jewish Genetic Diseases](#)

Learning about your heritage is a beginning. All around the world distinct ethnic groups have been identified as having increased risks for genetic diseases. In the Ashkenazi population, several such inherited diseases are known.

These include Gaucher disease, cystic fibrosis, Canavan disease, Bloom syndrome and others.

Gaucher (go-shay) Type 1 is the most common Jewish genetic disorder.

Among Ashkenazi Jews 1 person in 15 is a carrier for this disease, and approximately 1/850 has Gaucher disease.

This event will provide you with an opportunity to learn more about genetic disease among persons from Ashkenazi Jewish descent.
